GS1 US Data Hub 3.4 | RELEASE NOTES

EFFECTIVE: July 9, 2018

Data Hub 3.4 continues to support GS1 US subscribers by helping them to identify, create, manage, use, and verify data through one convenient, data-sharable platform. This release covers user requested and required platform changes since the March 2018 update.

REQUIREMENTS

- **NEW** Developer Portal and API URLs: A new platform with supporting documentation is released to production. Documentation is added to the Help Center. Requires Web Services subscription.
- **NEW** Search by Modified Date Range via API Product and Company: New URLs for each are added as v3. Requires Web Services subscription.
- **NEW** Location View/Use for GPOs: Location searches now include a check box to include your locations in third party searches. Results table includes a column indicating which locations are the GPO's own location. Process allows GPO to edit own location detail and return to top level search results.
- **NEW** Location Provinces added: Provinces for China and Italy were added to the drop-down list for each.
- **NEW** Product Create/Manage: Application Identifier 8012 added to help brand owners identify software versions in GS-128 barcodes.

ADDITIONS

- **NEW** Guided experience called "WalkME" has been added to the home screen and throughout DH for helping new and infrequent users create barcodes, product and location records, etc.

REMOVALS

- **REMINDER:** Results files are deleted from data tables after 90 days on Import and after 30 days on Export.
